The main() Method

The main() method

- Java program starts by executing the main() method:

// there are other permissible ways to write the main method:

```
public static void main(String[] args) { }
```

```
public static void main(String[] someOthersillyName) { }
```

```
public static void main(String args[]) { }
```

```
public static void main(String... args) { }
```

```
public final static void main(final String[] args) { }
```

```
static public void main(String[] args) { }
```

// N.B. the return type must follow the name of the method!

```
public class Names {  
    public static void main(String[] args) {  
        System.out.println("First name: " + args[0]); // arrays count from 0  
        System.out.println("Last name: " + args[1]);  
    }  
}
```

```
javac Names.java      -> Names.class
```

```
java Names John Wayne
```

```
    First name: John
```

```
    Last name: Wayne
```

```
java Names John
```

```
    [index out of bounds exception]
```

```
java Names John D. Wayne
```

```
    First name: John
```

```
    Second name: D.
```

```
java Names "John D." Wayne
```

```
    First name: John D.
```

```
    Second name: Wayne
```
